AICTE APPROVAL WORKFLOW & INSTITUTIONAL COMPLIANCE MONITORING

SMART INDIA HACKATHON 2026

PROBLEM

High application volume

Applications pass through multiple stages, Regions and responsible officials.

Missed deadlines

Undertakings, EVC timelines and document renewals can be overlooked.

Scattered information

Application status, inspection schedules and compliance records need repeated follow-up.

Manual coordination

Officers spend time tracking cases, sending reminders and preparing reports.

OUR PROPOSED SOLUTION

Our solution is a centralized platform that automates APH-based application routing, tracks institutional compliance and document validity, and alerts institutions and officials when action is due.

1. **Application Received** — Collect applications and required documents
2. **Workflow Routing** — Route applications through APH-prescribed stages
3. **Track & Verify** — Record observations and verify compliance documents
4. **Alerts & Reports** — Notify users, escalate overdue cases, and show live status

Live Dashboard Preview

INNOVATION & UNIQUENESS

APH-Aligned Workflow Rules

Configurable routing and timelines follow the applicable Approval Process Handbook.

Complete Digital Case History

Every movement, observation, submission and decision is time-stamped and traceable.

Deadline & Document Tracking

Tracks EVC dates, undertakings, lease expiry and other prescribed document deadlines.

Human Authority Retained

Automates reminders and routine routing; statutory verification and decisions remain with competent officials.

TECHNICAL APPROACH

SMART INDIA HACKATHON 2026

1 CAPTURE

Institutional & AICTE Applications

- Institutions
- Regional Offices
- AICTE Bureaus
- Authorised systems

2 INTEGRATE

Centralised Application & Institution Data

- Institution ID and profile
- Application details
- Stage and assigned officer
- Undertakings and documents

3 PROCESS

Apply APH workflow and deadline rules

- Determine next stage
- Calculate ageing and due dates
- Track EVC and compliance
- Generate alerts

4 MONITOR

Real-time Dashboard and Alerts

- Stage-wise pendency
- EVC and compliance status
- Expiry and overdue alerts
- Region-wise reports

APPLICATION MOVEMENT – EXAMPLE

ABC Technical Institute

EVC	SCRUTINY
Stage 2 EVC required after preliminary scrutiny	Stage 1 Application documents reviewed
Scheduling pending	Completed

Next Prescribed Stage

Application advances after stage approval.

KEY DESIGN PRINCIPLES

- **Secure Access** Role-based access for institutions and authorised officials
- **Human Oversight** Officials verify evidence and take statutory decisions
- **Centralised Records.** One record per application and institution
- **Configurable Rules** Adapt stages and timelines to the applicable APH

FEASIBILITY AND VIABILITY

SMART INDIA HACKATHON 2026

FEASIBILITY

Why is this idea feasible?

Proven Web Technologies

Web, database and notification technologies required are widely available.

Modular Development

Build workflow, dashboard, EVC and compliance features as separate modules.

Centralised Records

Integrate existing AICTE application and institution records through approved interfaces.

Scalable Architecture

Authorised APIs and role-based access can support phased integration with existing AICTE systems.

Cost Effective

Open-source technologies can reduce implementation and maintenance costs.

POTENTIAL CHALLENGES AND RISKS

What needs careful handling?

Data Integration

Use approved interfaces and phased onboarding of existing systems.

Legacy Data Integration

Existing systems may store institution and application details in different formats.

Data Quality

Incomplete records or incorrect dates can affect routing and deadline calculations.

Privacy & Security

Application documents and institutional records require strict confidentiality.

Change Management

Regions and committees may follow different authorised workflows and timelines.

STRATEGIES FOR OVERCOMING THESE CHALLENGES

How will we address them?

Phased Implementation

Start with sample data, then connect official systems through authorised APIs.

Verified Institution Records

Use verified institution IDs and standardised records for reliable tracking.

Data Validation

Validate mandatory fields and flag incomplete or inconsistent submissions.

Strong Security

Enforce role-based access, secure authentication and complete audit logs.

Configurable APH Rules

Configure APH-based statuses, reminders and officer-reviewed workflow updates.

Verifix 5

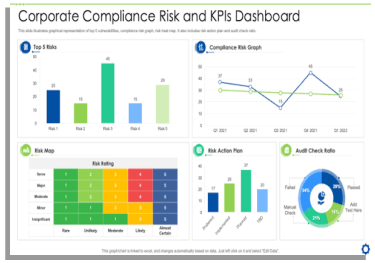

IMPACT AND BENEFITS

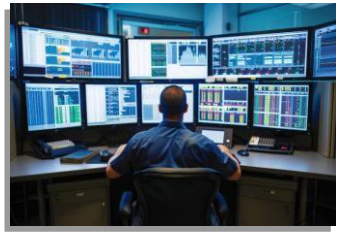

SMART INDIA HACKATHON 2026

Faster Processing
Applications move through prescribed stages with less manual coordination.

One Integrated Platform
Application status, EVC, compliance and documents are visible together.

Centralised monitoring
Centralized monitoring of institutional compliance, submissions, and document validity.

Fewer Missed Deadlines
Overdue undertakings and renewals are escalated to responsible officials.

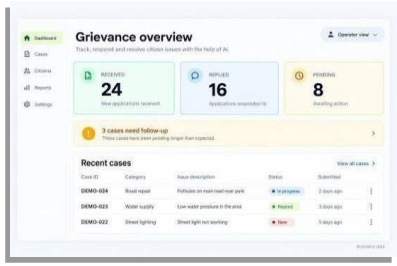

Complete Audit Trail
Every action, submission, verification and escalation is time-stamped.

Timely Alerts
Institutions and officials receive reminders before deadlines and expiry dates.

Better Administrative Visibility
Dashboards reveal bottlenecks, ageing cases and workload.

Reduced Manual Follow-up
Automated routing, reminders and reports save officer time.
